

Sarayu: Visualize Chats

Verloop Hackathon, Sept 2020

Team: Lunar Void

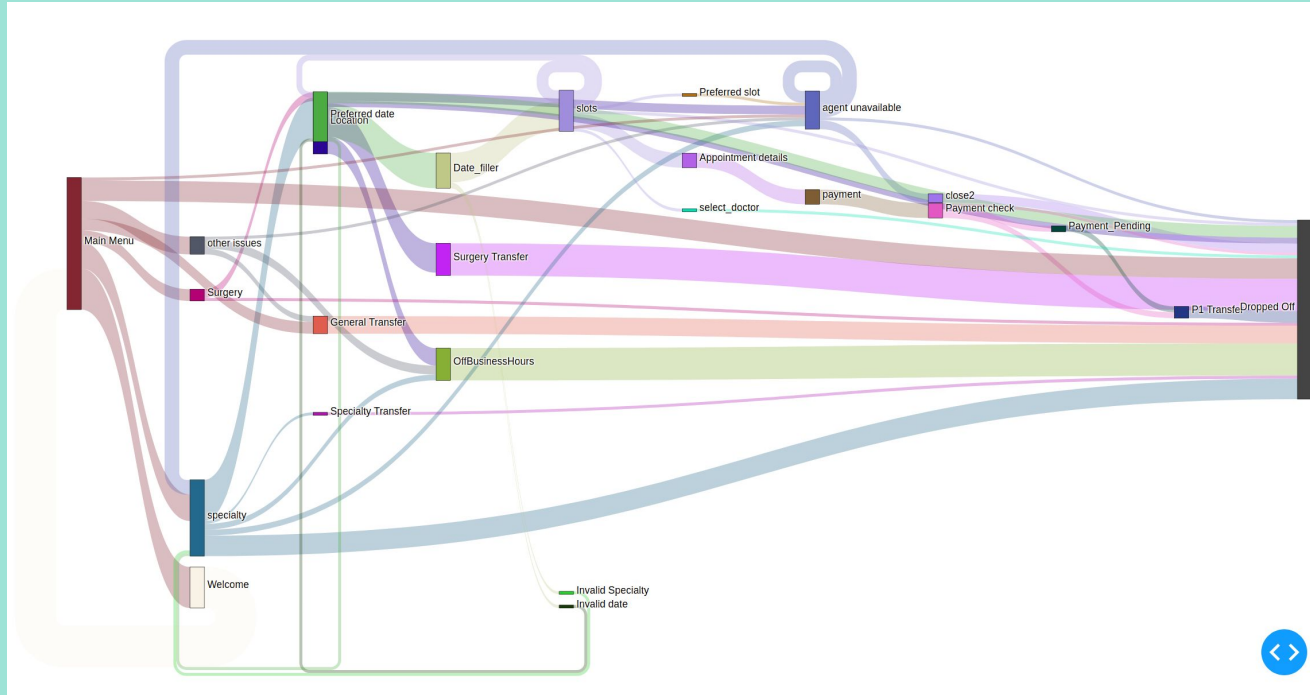

Udit Agarwal and Shailendra Paliwal

The Problem

- If we think of a Verloop recipe as a funnel, there's no straightforward way to find out the holes in the funnel.
- Identifying points of drop-offs and fixing them is the only way to iteratively improve chat recipes

Solution

Why not just show our clients, where their users spend most of their time?

What we will be making?

1. A website where you can upload Verloop Reports for Analysis.
2. It draws an interactive chart to visualize user journeys
3. Make edits on the chart and share it with an easy link
